

PRESS RELEASE

HEDNO announces that, today, during the afternoon, the gradual restoration of electricity supply has begun in Tinos island. The electricity supply was interrupted due to faults in the Grid caused by extreme weather conditions that prevailed during the last days within the wider area of South Evia and Cyclades.

Despite the difficult weather conditions, HEDNO's service team has managed to reach the points where faults occurred in the Grid lines – from which Tinos is supplied with electricity through underground cable – in the mountain area of Andros and proceeds to their restoration.

All possible efforts are made by HEDNO's personnel, so as to prevent further inconvenience to consumers.
