

PRESS RELEASE

**HEDNO to launch assessment process on November 4, 2016,  
for financial offers regarding Telemetering (smart meters)  
Pilot System**

HEDNO would like to inform the public that the Council of State rejected all three applications for interim measures that had been submitted with reference to the tender "Pilot Telemetering and Management System for the Electric Power Supply Demand by Residential and Small Commercial Consumers and Implementation of Smart Grids".

Applications referenced the typical and technical features of the offers that were to be assessed by the Committee discussing actions of the tender and, following their rejection by the Council of State, the Review Committee will continue with the process and open the financial offers submitted by Intracom Telecom and OTE Group of Companies- Intrakat-Intrasoft International, on Friday, November 4, 2016.

The tender concerning the placement of approximately 200,000 Smart Meters across Greece is one of the key strategic projects implemented by HEDNO in line with its business plan given that the conclusions drawn and the experience that will be gained through such implementation will pave the way for telemetering to expand across the country.
