

COMMUNICATION

Given that the hunting season is due to begin ([GG \(FEK\) 2536/B'/17-08-2016](#)), HEDNO would like to emphasize that hunters should refrain from shooting game when these are on or near electrical networks (conductors, cables, poles, substations, insulators, etc.) as there is a great risk of accident, injury, fire, fault in the power supply network, etc.

It should be reminded that in any event of accident due to the above-mentioned causes, those responsible shall be prosecuted.

Moreover, given HEDNO's awareness on people's safety, HEDNO recommends that if any damage to the power supply Network (fall of cables, conductors, etc.), which might have been caused by the above-mentioned situations or by other factors, comes to someone's attention, they should immediately notify the Faults office of HEDNO's local unit, prevent third-party intervention and keep everyone away from that point.
