

## ANNOUNCEMENT

This year's hunting season has opened ([ΦΕΚ 2809/Β'/10-08-2017](#)) and HEDNO would like to advise hunters to refrain from shooting game when on or near electrical networks (conductors, cables, poles, substations, insulators, etc.) as there is serious accident, injury, fire and power supply fault risk.

You are reminded that there will be prosecution of the person(s) responsible for any accident caused by any the above-mentioned situation(s).

For safety reasons, HEDNO advises the public to report any power supply network damage(s) (fall of cables, conductors, etc.) caused by any the above-mentioned or other situation(s) to a local HEDNO faults office in order to prevent third-party intervention and restrict public access to the area.
