

PRESS RELEASE

Clarifications on the power theft incident reported in the coffee shop located in Kolonaki

On the occasion of the incident of power theft reported in a well-known coffee shop in Kolonaki, HEDNO would like to clarify that:

On Tuesday 9 October 2018, a HEDNO technical crew carried out local inspection on the shop's premises, in the presence of the business manager, and detected interference which prevented the largest part of consumed energy from registration in the energy meter. Beyond any doubt, this is a case of electricity theft.

After examining the account's consumption history we confirmed that meter tampering has been taking place for the last 5 years, resulting in unmeasured electricity worth over EUR 40,000.
