

## ANNOUNCEMENT

### **Electricity outages in Chios**

On 10 December at 3pm, the central part of the city of Chios, including the central port and the market, suffered a power cut caused by damage at the interconnecting underground cable. We are currently investigating the causes of this incident. During damage detection, the electricity system of Chios (includes the islands of Chios, Psara and Oinnouses) suffered several outages in cable lines supplying villages in south and central Chios.

HEDNO would like to apologize for the inconvenience caused and thank all consumers for their understanding. We are making every effort to resolve the problem and restore smooth power supply for the islands.
