

## PRESS RELEASE

### **Restoration of smooth operation of the Rhodes audio-frequency remote control system**

On January 24, 2019 around 02:50 there was a fault in the audio-frequency remote control system of the Rhodes electricity system. As a result, there were issues with turning street lighting on and off and the activation-deactivation of consumers' reduced and special tariffs.

HEDNO would like to apologize for the inconvenience caused and to thank all consumers for their understanding. We are making every effort to resolve the problem and we will be taking measures to ensure that there are no additional charges to consumers due to the non-operation of reduced tariffs.
