Update on the progress of electricity supply restoration in the areas of Evia and Pelion

HEDNO would like to announce that, currently, its crews continue to work hard to restore the electricity supply in the areas of Evia and Pelion.

More specifically, in Northern Evia, works continue in the Municipality of Istiaia and in the Municipality of Limni-Mantoudi to restore electricity supply in 10 settlements within the next hours.

In the Municipality of Dirfys-Messapia, where it is still impossible for crews to gain access to the parts of the Network that have been damaged by the snowstorm, one of the four snow-blocked settlements was just supplied with electricity via Generating Sets.

Finally, the works for electricity supply restoration are being concluded in three villages, in the southern part of Pelion.
