

## COMMUNICATION

Providing continuous information regarding the power supply failure on the island of Poros, HEDNO would like to announce that the power supply is currently being gradually restored in the biggest part of the Sfairia port and along the island's pier, where most of the tourist infrastructures are located.

The 6 Medium Voltage Power Generators along with the other 2 Low Voltage Power Generators that were transported to the island are in operation and will gradually cover a significant part of the whole island's electricity needs.

At the same time, work continues for the restoration of the extensive damages to the overhead line supplying the island with power from Galatas.
