

New institutional framework for the installation of auxiliary station with Generating Sets (G/S)

HEDNO would like to inform the interested parties the following:

The decision of the Regulatory Authority for Energy, No. 754/2019, which was published in the Government Gazette (GG) B' 3433/11.09.2019, sets forth the procedure for the submission of applications and the examination of the files for the connection and operation of auxiliary stations with generating sets (G/S) aiming at the auxiliary supply in HEDN, in application of article 132, par. 13, Law 4001/2011¹.

The applications for the installation of auxiliary G/S stations for accounts connected with the Distribution Network shall be submitted to the local HEDNO offices. The submission file shall be examined and then the time for the on-site inspection shall be determined to verify whether the connection and operation requirements for the G/S are observed to provide the auxiliary supply. Upon the successful technical inspection and the submission of the required documents, the Additional Agreement for auxiliary electricity generation is signed by HEDNO and the applicant. Then, in order to conclude the procedure for the start of the operation of the auxiliary power generation station, the applicant submits a Solemn Declaration to the Development Directorate of the relevant Region, according to the model of the Ministerial Decision, No. ΥΠΕΝ/Δ Η Ε/89003/443 (GG B' 5674/17.12.2018), which is then notified to HEDNO.

It is noted that for the applications that have already been submitted to RAE but no exception certificates have been issued due to the change in the legislative framework, the files have been sent to the local branches and the interested parties shall be notified by letter to submit any documents required by the new procedure, if said documents are not included in the submitted file.

Detailed information about the submission procedure and the required documents can be found at the website:
