

ANNOUNCEMENT

HEDNO would like to announce that just a while ago, with the operation of the Autonomous Generation Unit of PPC in Andros, electricity on the island as well as Tinos has been restored.

Isolated local damages that have been caused in the Network of the two islands due to strong winds are gradually being repaired by HEDNO crews which are on the spot working hard under difficult conditions to ensure the reconnection of power supply at all areas.

All HEDNO and PPC workers are working hard to ensure that consumers will not experience further inconvenience.
