

**Announcement****Clarifications on power supply problems that emerged at the Municipality of Agia**

Regarding the power supply problems that emerged at the coastal area of the Municipality of Agia over the last few days, HEDNO would like to stress that these are isolated Network damages.

HEDNO crews, immediately after the first power cut that took place on Saturday, 20 June, proceeded with inspecting the Network and detecting the damage which was caused by the fall of tree branches on pipes due to bad weather conditions.

Yesterday, on Saturday 27 June at about 19:00, a damage occurred on a Medium Voltage line that power-supplies the area. HEDNO's crews were immediately notified and were enhanced further with technical staff from other areas in order to fully restore power supply. Up until this hour, almost the entire region has been reconnected to power supply, excluding the settlements of Koutsoupia and Kokkino Nero. The works and the thorough inspection of the Network are continuing in order to ensure the smooth and uninterrupted power supply of the area.
