

## ANNOUNCEMENT

HEDNO would like to announce that today, Monday 15 February 2021 and until this hour, electricity issues due to the severe Medea weather system are currently afflicting the following areas:

In Attica, at Ekali, Drosia, Agios Stefanos, Rodopoli, Stamata, Markopoulos Oropou, Kapandriti, Avlona and Kalamos.

In the rest of the country, most problems are currently afflicting Evia, where the cold front is severe and HEDNO's crews are having difficulty to access the area and restore the damages that have been caused by heavy snowfall, mainly at the northern part, at villages near Aidipsos and Mantoudi.

Electricity supply damages have also afflicted the central and eastern part of Zagori, part of the municipality of Tzoumerka and Mesopirgos, Arta.

At the Region of Macedonia-Thrace and the islands, there have been no significant electricity issues.

Regarding electricity supply at Sporades, HEDNO's crews have teamed up with the Fire Service and are working extremely hard in order to access and restore the parts of the Network that have been damaged due to the fall of trees.

HEDNO's entire workforce will continue their non-stop efforts to restore all Network damages that have been caused by the extreme weather system. Please note that these restoration works are extremely difficult in many cases, particularly at mountainous areas due to road network access problems.
