

COMMUNICATION

On the occasion of the opening date of the hunting period ([GG 3053/B'/23.07.2020](#)), HEDNO would like to draw the attention of the hunters not to target their preys when they are on or near power grids (lines, cables, poles, substations, insulators etc) as there are serious risks for accidents, injuries, damages in the electricity network etc.

We would like to remind you that should an accident is caused due to the above, the liable persons are persecuted by Law.

Furthermore, HEDNO, always having as a basis the citizens' safety, suggests that if a citizen sees a problem at the power network, such as fall of cables, conductors etc, which may have been caused by the above or any other reason, to immediately inform the office responsible for the faults of the local HEDNO branch (call center: 11500), to prevent the intervention of third parties and encourage the citizens to stay away from said site.
